

Manufacturers of Hydrion® brand pH and sanitizer test papers since 1934

SAFETY INFORMATION ON HYDRION pH TEST PAPERS AND STRIPS

Hydrion pH test papers and strips are classified as articles under OSHA regulations, exempting them from the requirement for Safety Data Sheets (MSDS or SDS) or Certificates of Analyses as per OSHA's Hazard Communication Standard (29 CFR 1910.1200). They can be safely transported by air, sea, or ground.

These test products consist of indicator dyes impregnated into paper. While the dye concentration is minimal, they are specifically intended for in vitro use and should not be ingested.

Hydrion test products are composed of stable and non-reactive materials that are neither volatile nor radioactive. Additionally, they are free from latex, mercury, and lead.

For disposal, adhere to local environmental waste procedures and regulations.

When stored in a dry environment and shielded from direct sunlight, Hydrion test papers retain their efficacy for a shelf life of two years.
